

BLUEQUIP AUTOMATIC STAINLESS STEEL ADBLUE NOZZLES

The Bluequip Automatic Stainless Steel AdBlue Nozzle is highly regarded worldwide! These nozzles are ideal for dispensing urea, or DEF as it is referred to in the US. As the name refers, these automatic nozzles are designed to shut off the flow when the tank is full, allowing the safe use of the integrated stay-open latch.

These AdBlue nozzles are constructed of stainless steel with a plastic handguard for comfort and are supplied with a 3/4 swivel hose tail for easy hose connection. This AdBlue dispensing nozzle is often used in the Bluequip AdBlue pump kits.

The BLUEQUIP AdBlue Miss-Filling Magnet is used to prevent AdBlue from being mis-filled into a diesel vehicle.

Please note: Only for use with AdBlue pumps - not suitable for gravity-fed installations.

FEATURES & BENEFITS:

- Automatic AdBlue Nozzle
- Maximum flow rate: 60 LPM
- Suitable for urea and water
- Stainless steel body & spout with a plastic guard
- 3 position stay open latch
- Supplied with 3/4 hose barb swivel
