

LUBESHOT SD120 SERIES

The Lubeshot SD120 Series is a single-point self-contained programmable lubricator designed to suit almost any application.

It has a self-dispensing canister of lubricant designed to screw into a grease nipple socket, lubrication points, or fitted remotely to discharge its content.

FEATURES & BENEFITS

- Economical, cost-effective point-of-use lubricator
- Simple selection dial for lubricant dispensing rate
- Tamperproof feature where it cannot be accidentally knocked or changed through the operation
- Visual indicator lets you know at any time the volume of lubricant remaining in the unit
- Unique pressure relief valve that provides a visual indication that a blockage is preventing lubricant from flowing to the bearing
- Safe for hazardous and EX environments
- Rust, dent, and corrosion resistant. It can be used in almost any environment, market, and industry including underwater applications
- No disposal issues. It has no batteries or harmful chemicals contained in the lubricator
- Easy to read label and identification markings on it to indicate the type of lubricant used in the canister and re-ordering information

SPECIFICATIONS:

Brand	A-FLO Equipment
