

FUEL FILTER

It is important to filter fuel prior to dispensing it into fuel equipment in order to get the max out of the equipment and to also meet the ISO cleanliness specifications of today. A-FLO Equipment's ULTRAFLO single-pass filtration fuel filters can be used at the inlet or at the dispense point which will reduce the risk of contamination and decrease in performance.

FEATURES & BENEFITS:

- Best capture and retention of injector damaging contaminants.
- Best performance in heavy-duty environments (inferior filters can "shed" contaminant during engine vibration).
- Helps minimize expensive repairs and unplanned downtime.

SPECIFICATIONS:

Dimensions	40x15x15
Weight	2 Kg

PART NO.

AF-UF-DBB8666	All Fuels 4 micron@Beta 2000 (P568666)
AF-UF-DBB0248	Water Absorbing Media For Ethanol - Free Fluids (P570248)
