

ULTRAFLO B.O.S.S PUMP

The ULTRAFLO B.O.S.S is designed for performance, convenience, and safety. Its features make it the best choice for protecting your machinery from wear and failure caused by contamination.

FEATURES & BENEFITS:

- The dual filter head is fitted (as standard) with two 25um @ B2000 spin-on filters for cold or heavier fluids. For lighter fluids, you have the option of two 7um @B2000 spin-on filters. Alternatively, a pair of water-absorbing filters can be used to remove moisture. This head is ported to run in parallel for high flow capacity and should always be fitted with two filters of the same rating.
- The powerful 1.2kw motor is coupled to a 40lmp gear pump to provide smooth and efficient fluid transfer and filtration. Differential pressure gauges display when the filter requires replacing. New filters can be fitted in minutes as the B.O.S.S is mounted on gel-filled wheels for easy maneuvering. Using the optional brackets, it can be wall-mounted.
- **Filters supplied with the unit:** 25UM@BETA 2000 Engine Oil & Gear Oil (2 required).

SPECIFICATIONS:

Dimensions (MM)	980x820x1440
Weight	75 Kg
