

ZVA ADBLUE DISPENSING MAGNETIC NOZZLE

AdBlue is not compatible with many materials and miss-filling can corrode the pipework and components of a fuel system, resulting in costly damage to the vehicle and its parts.

The ZVA Automatic AdBlue Magnetic Nozzle prevents this by only allowing fluid to pass once it has been magnetically opened by the AdBlue magnetic adaptor fitted within the vehicle filler neck.

Therefore, by using this AdBlue nozzle you cannot physically dispense into the wrong tank, as the diesel fill point will not contain a magnet. This is one of the biggest advantages of Magnetic Nozzles over Non-Magnetic Nozzles.

The ZVA Automatic AdBlue Magnetic Nozzle has been approved for use in heavy use, and resale environments, such as those seen at the

FEATURES & BENEFITS:

- Automatic AdBlue Nozzle
- Magnetic spout to prevent miss-filling
- Maximum flow rate: 40 LPM
- Suitable for urea and water

SPECIFICATIONS:

Dimensions	41x18x6
Weight	3 Kg

PART NO.

AF-EF-102-ZVA3M-ADBLUE/M Magnetic Adblue Nozzle (Magnet included)

*Please Note - Only for use with AdBlue pumps - not suitable for gravity-fed installations.
