

# EXHAUST GAS EXTRACTION SYSTEM

MELBOURNE CITY TOYOTA

**MAKING EVERY DROP COUNT**

In the automotive repair industry, safety is a top priority. One often overlooked aspect of safety in workshops is the presence of harmful exhaust gases produced by vehicles during servicing and repairs. Without proper control and extraction systems in place, mechanics are exposed to these potentially hazardous fumes, which can lead to health issues or even fatalities if not adequately managed. This is where automotive exhaust extraction systems come into play, offering a crucial layer of protection.

#### THE IMPORTANCE OF EXHAUST GAS EXTRACTION SYSTEMS

New-generation diesel engines are known to produce significantly smaller particles than their older counterparts. In fact, they can generate 15 to 35 times more ultra-fine particles that are invisible to the naked eye. While this might make the dangers seem less apparent, they are far from nonexistent. These ultra-fine particles pose a significant risk to the health and safety of operators, making the installation of an efficient exhaust extraction system a necessity.

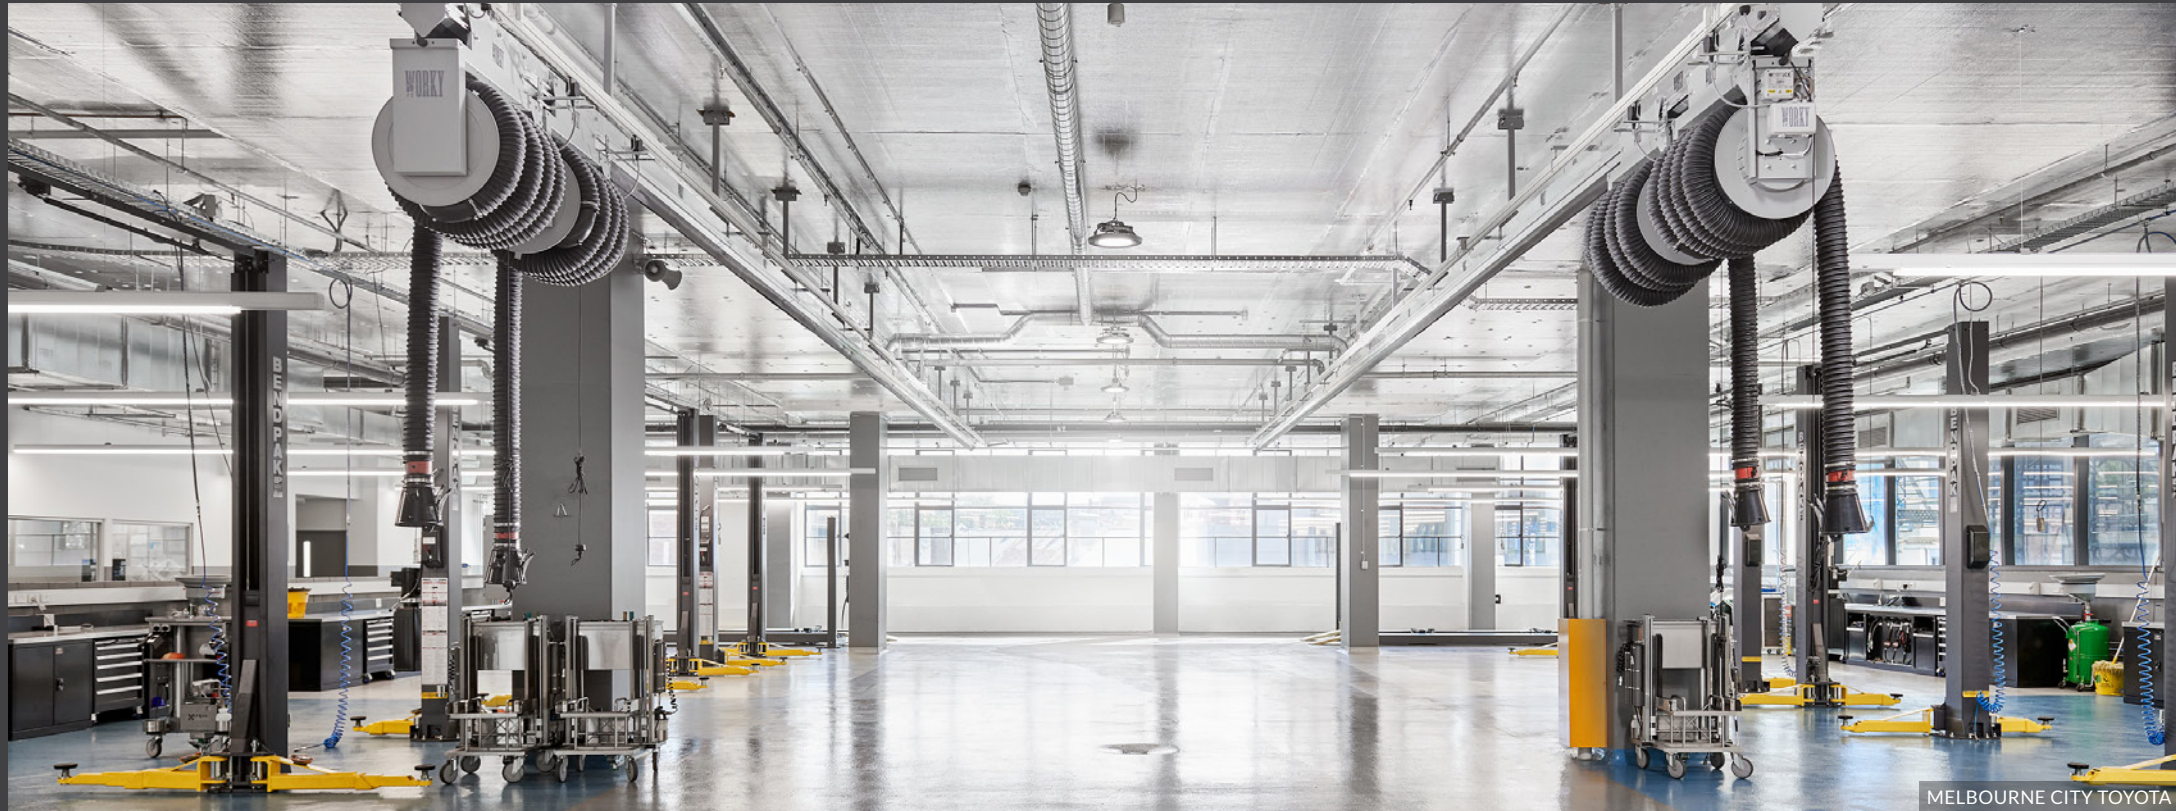

#### WHY YOUR WORKSHOP NEEDS AN EXHAUST EXTRACTION SYSTEM

New-generation diesel engines are now producing 15 to 35 times more small particles than old-generation diesel engines. The new generation engines produce more ultra-fine particles invisible to the naked eye! Because of this, it seems that the dangers have disappeared, but this is far from the truth. This has become an integral part of any workshop fitout and a must-have to prevent and protect your operators from any potential health and safety issues this may cause.

A-FLO's systems are efficient and create a far greater standard of safety work mechanics in the workplace.

## FURTHER REASONS TO INVEST IN AN EXHAUST EXTRACTION SYSTEM FOR YOUR WORKSHOP

MELBOURNE CITY TOYOTA

**STAFF SAFETY:**

The primary goal of an exhaust fume extraction system is to safeguard the health and well-being of your mechanics and operators. By capturing and removing harmful fumes at the source, these systems prevent exposure to toxic gases. You can also incorporate industrial hose reels into your workshop for added efficiency and safety.

**LEGAL COMPLIANCE:**

Workshops must adhere to strict health and safety regulations. Installing an exhaust extraction system ensures your workshop complies with these standards, mitigating potential legal risks.

**IMPROVED PRODUCTIVITY:**

Cleaner and safer working environments lead to increased productivity. Mechanics can focus on their tasks without the worry of inhaling hazardous fumes, resulting in enhanced efficiency. Consider including a compressed air pipework system in your space to further optimise your workshop's air supply system and boost productivity.

**LONG-TERM COST SAVINGS:**

While investing in an exhaust extraction system incurs an initial cost, the long-term benefits far outweigh it. Fewer health-related absences and improved worker retention will contribute to cost savings.

**PEACE OF MIND:**

Knowing that your workshop prioritises the safety of its employees fosters a sense of trust and loyalty among your team. It also assures customers that their vehicles are serviced in a safe environment.

## MAKING EVERY DROP COUNT

## A-FLO'S EXHAUST FUME EXTRACTION SYSTEMS

At A-FLO, we understand the critical role of exhaust extraction systems in workshops. Our advanced and updated exhaust gas extraction systems are engineered to meet the highest safety and performance standards. We provide:

### EXPERTISE:

Our team of experts with over 30 years of experience can assess your workshop's specific needs and recommend the most suitable exhaust extraction solution.

### QUALITY:

We provide exceptional systems that are built to last, ensuring that your investment offers long-term protection.

### COMPLIANCE:

Our exhaust extraction systems comply with Australian safety regulations, giving you confidence in your workshop's legal standing.

### SAFETY:

Protecting the health and safety of your mechanics is our top priority. With our systems in place, you can create a safer work environment.
